Professional Summary

Physicist and PhD candidate specializing in aerosol physics, atmospheric dynamics, and computational modelling. 8+ years of end-to-end data lifecycle expertise—from instrument calibration and data collection to statistical analysis and impactful stakeholder presentations. Co-author of a Nature paper and veteran of **three measurement campaigns at the CLOUD experiment (CERN)**. Equally comfortable writing code, running simulations, and working hands-on in the lab. Objective, collaborative, and evidence-driven.

Core Skills

Technical **MATLAB, Python, C++, R, SQL, GitHub, Relational Databases**

Analytics Data Modeling, Visualization, Engineering, Management, Collection, Analytics, AI

Professional University Teaching, Lab QA, Instrumentation, Scientific Presentations

Professional Experience

Researcher | University of Tartu | Nov 2017 – Present

- Owned the full data lifecycle: maintained/calibrated instruments, collected and cleaned datasets, performed rigorous statistical/physical analysis, and delivered clear presentations to diverse audiences.

- Developed computational models for aerosol behaviour and cloud formation, bridging theory with real-world atmospheric applications.
 - Participated in **three measurement campaigns at the CLOUD (Cosmics Leaving Outdoor Droplets) experiment at CERN** – operated state-of-the-art chamber instrumentation, studied aerosol nucleation, and collaborated within large international teams.
 - Co-authored a high-impact paper in Nature; implemented laboratory quality assurance protocols to ensure reproducibility and data integrity.
-

Education

Degree	Institution	Year
PhD – Atmospheric Physics & Dynamics	University of Tartu	2018 – Present
MSc – Teacher Education & Professional Development	Tallinn University	2012 – 2015
BSc – Theoretical & Mathematical Physics	Tallinn University	2009 – 2012

Professional Development

Data Analyst Career Accelerator (DACA) | Jun – Sep 2026 | 312 academic hours
Intensive training in SQL, relational databases, Python for data science, data visualization, and real-world project work.

Languages
